

NCMP 2010/11

East Sussex

This report summarises the results from the National Child Measurement Programme (NCMP) for 2010/11. Graphs presenting national data are taken from *National Child Measurement Programme: England, 2010/11 school Year, 2011* The Health and Social Care Information Centre, available from <http://www.ic.nhs.uk/>

Due to errors in the data submission with the 2010/11 data, some published data for NCMP 2010/11 by the Information Centre is known to be incorrect. All coverage/participation data published is incorrect. All local authority data based on the postcode of the school (as opposed to child's residence) should not be used. Data published by The Information Centre that are valid are:

- Prevalence of underweight, healthy weight, overweight and obesity by PCT
- Prevalence of underweight, healthy weight, overweight and obesity by local authority of child's residence

Due to the errors with the dataset, no participation data is presented in this report, and no data is presented by school-based LPCs.

All graphs display 95% confidence intervals - this is the range within which we can be 95% certain that the true value lies within (in this case prevalence of underweight/obesity/overweight). For areas to have (statistical) significant differences in the prevalence of underweight/overweight/obese children, the confidence intervals must not overlap. Smaller geographies will have wider confidence intervals due to smaller numbers.

Prevalence of underweight, overweight and obesity

Prevalence rates have been calculated using the UK 1990 growth charts

- Underweight is \leq 2nd percentile
- Healthy weight is $>$ 2nd percentile but $<$ 85th percentile
- Overweight is \geq 85th percentile but $<$ 95th percentile
- Obese is \geq 95th percentile

Note - these thresholds are used for population monitoring but are not the same as those used in a clinical setting where 91st and 98th percentile are used for overweight and obese respectively

Prevalence of underweight, overweight and obesity

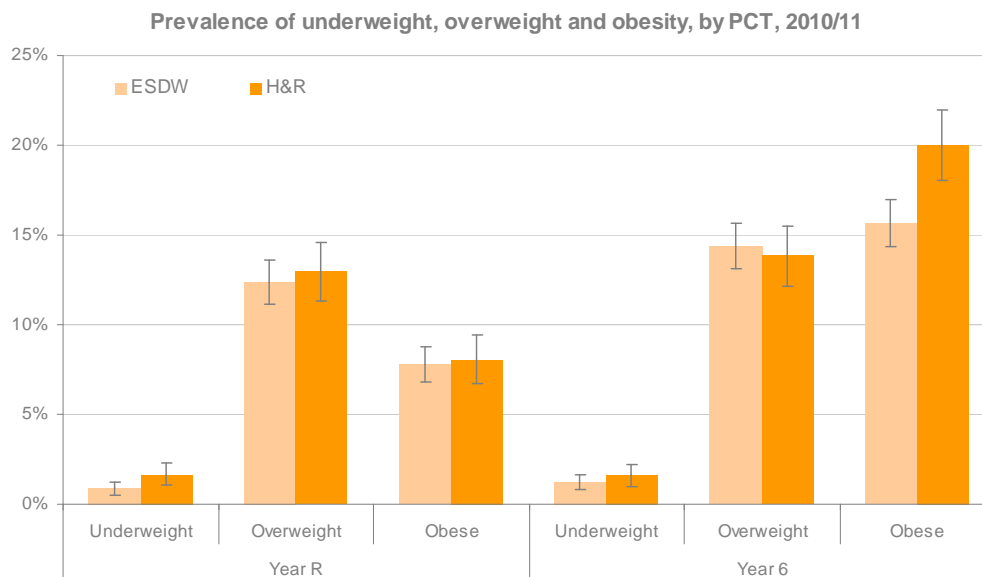

Year R	ESDW PCT	Target (ESDW)	H&R PCT	Target (H&R)	East Sussex	England
% underweight	0.9%	-	1.7%	-	1.2%	1.0%
% healthy weight	79.0%	-	77.3%	-	78.4%	76.4%
% overweight	12.4%	-	13.0%	-	12.6%	13.2%
% obese	7.8%	10.0%	8.1%	7.8%	7.9%	9.4%

Year 6	ESDW PCT	Target (ESDW)	H&R PCT	Target (H&R)	East Sussex	England
% underweight	1.3%	-	1.6%	-	1.4%	1.3%
% healthy weight	68.8%	-	64.6%	-	67.3%	65.3%
% overweight	14.4%	-	13.8%	-	14.2%	14.4%
% obese	15.6%	17.0%	20.0%	16.9%	17.2%	19.0%

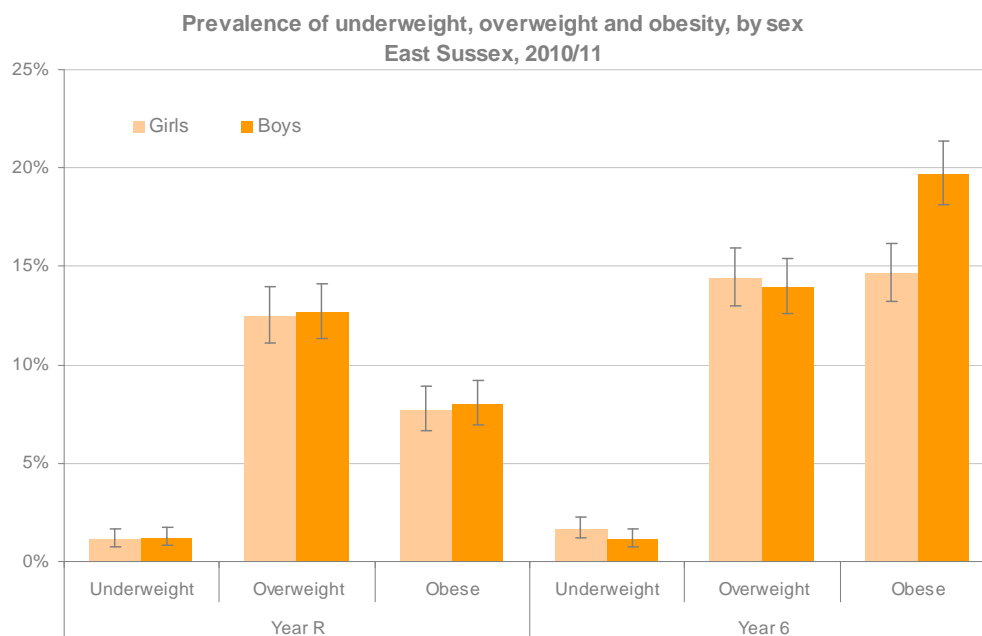

Numbers of children in each weight category by PCT

Year R	ESDW	H&R	East Sussex
Underweight	24	26	50
Healthy weight	2174	1200	3374
Overweight	340	201	541
Obese	214	125	339

Year 6	ESDW	H&R	East Sussex
Underweight	37	26	63
Healthy weight	2011	1047	3058
Overweight	420	224	644
Obese	457	324	781

- In both PCTs, the prevalence of obesity in Year 6 is significantly higher than in Year R.
- Prevalence of obesity in Year 6 is significantly higher in H&R PCT than ESDW PCT.

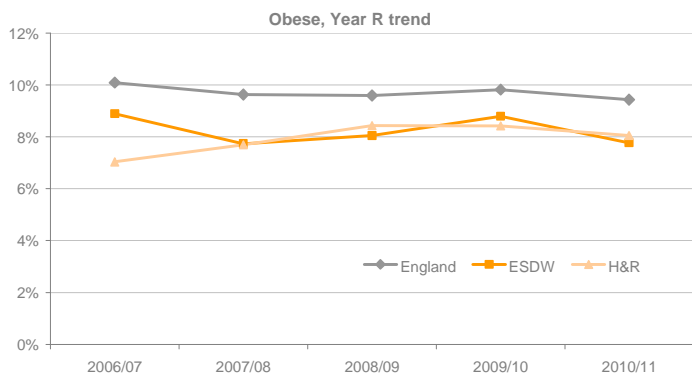

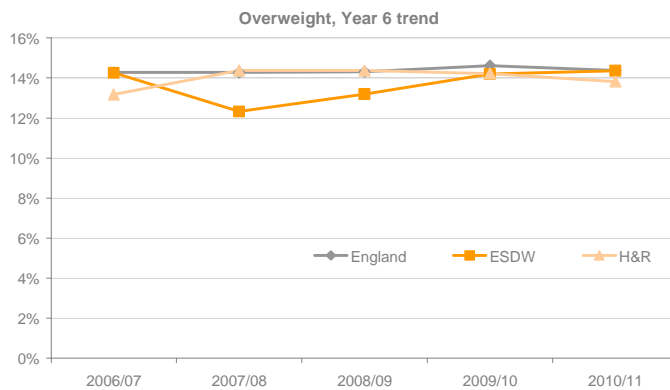

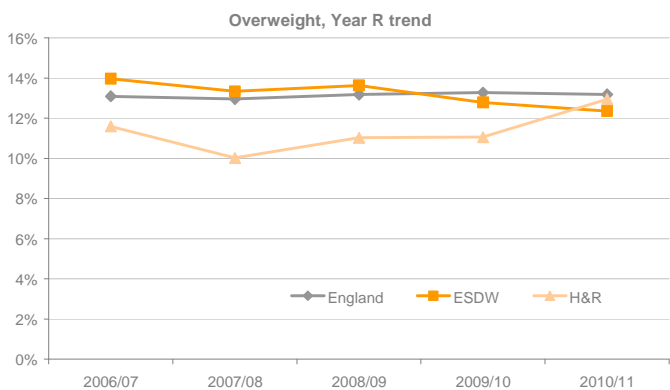

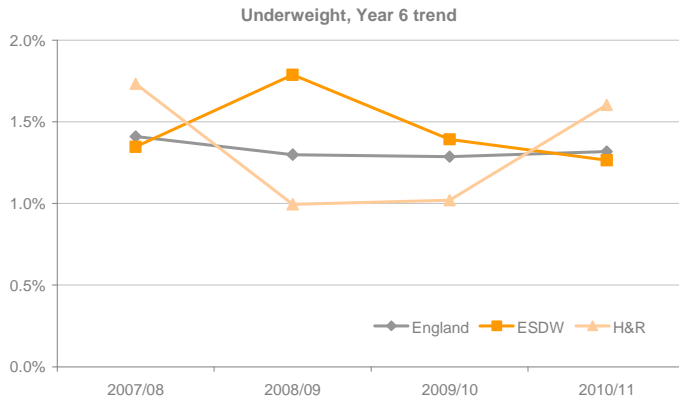

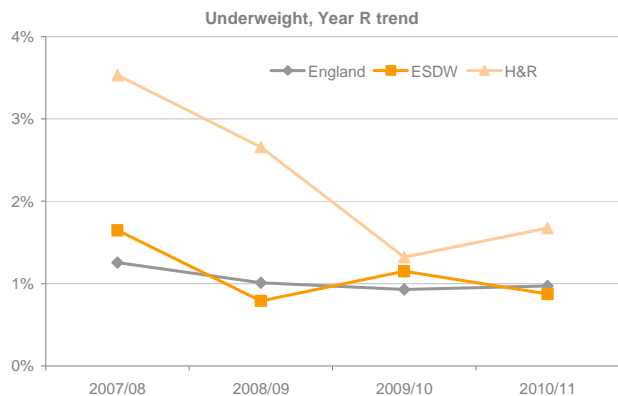

- In East Sussex, boys in Year 6 have a significantly higher prevalence of obesity than girls in Year 6.

Trend in weight classifications for East Sussex PCTs and England

Note that the numbers of children in East Sussex classified as underweight are fairly small and therefore we wouldn't expect to see a particular trend.

Note that in the earlier years there was a lower coverage of Year 6 pupils measured that is likely to have resulted in an under-representation of the proportion overweight and obese.

National Child Measurement Programme 2010/11

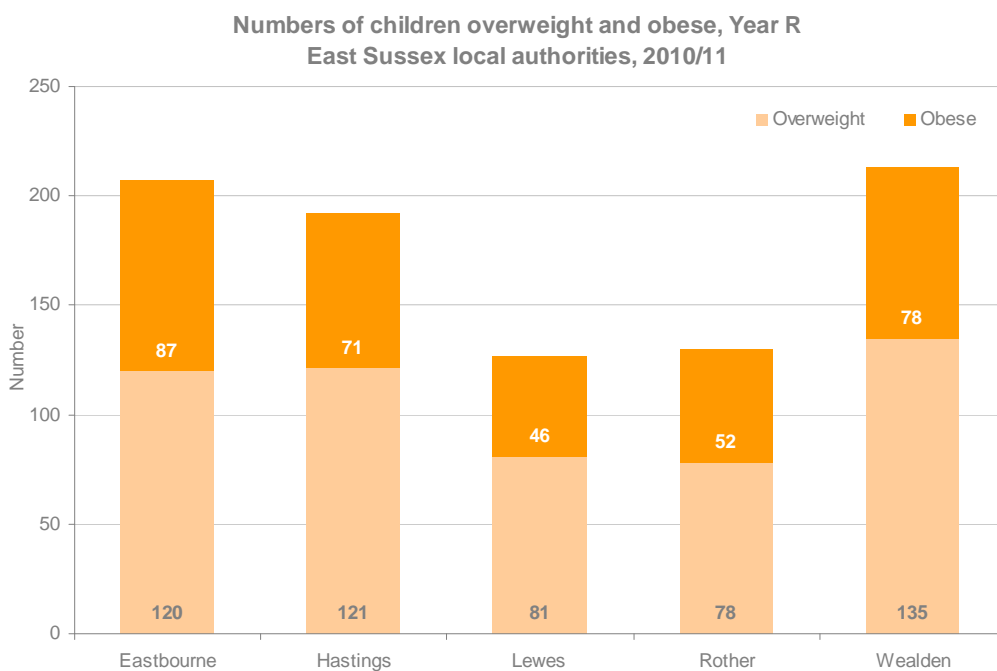

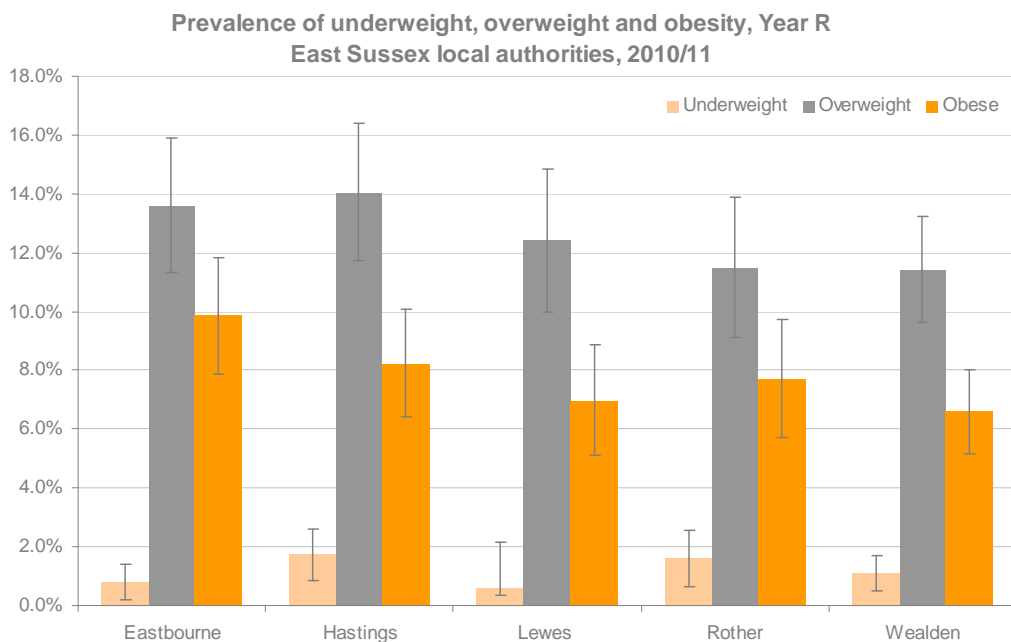

East Sussex local authorities - prevalence of underweight, overweight and obesity

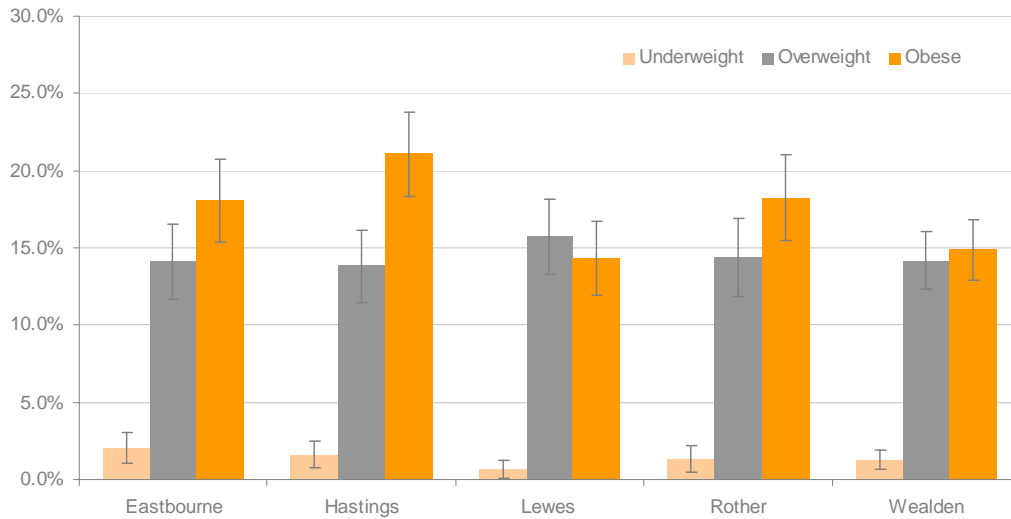

The number of children overweight and obese is presented as well as prevalence, as those local authorities with higher prevalence of

overweight/obesity, may not have the highest *numbers* of children who are overweight or obese.

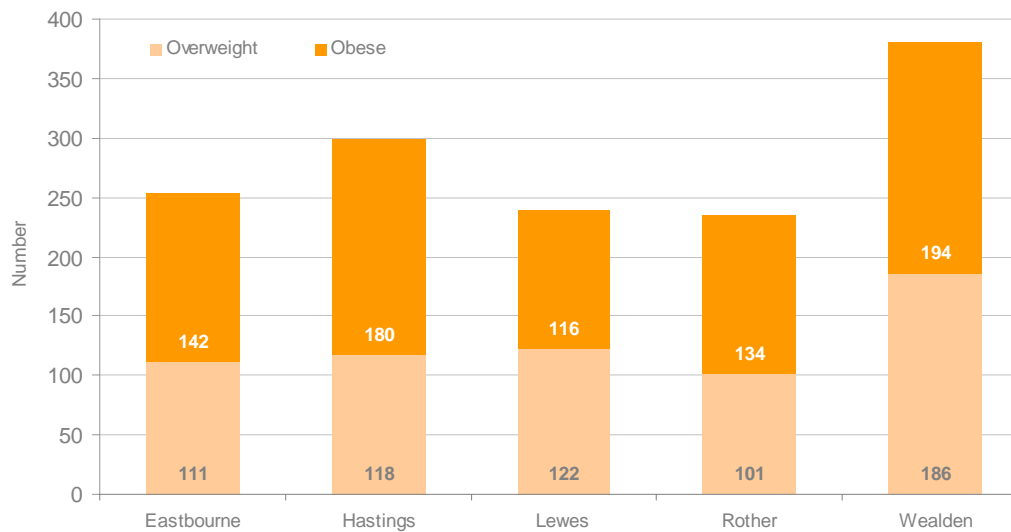

Analysis by Local Partnerships for Children (LPCs) and Children’s Centre, based on pupils postcode of residence, is provided in the appendices.

Prevalence of underweight, overweight and obesity, Year 6
East Sussex local authorities, 2010/11

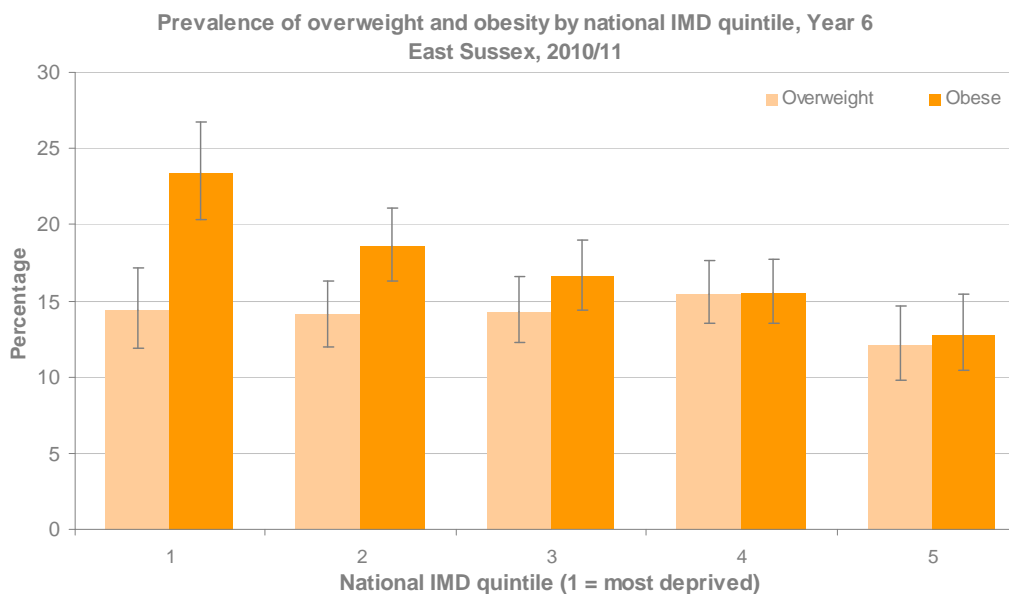

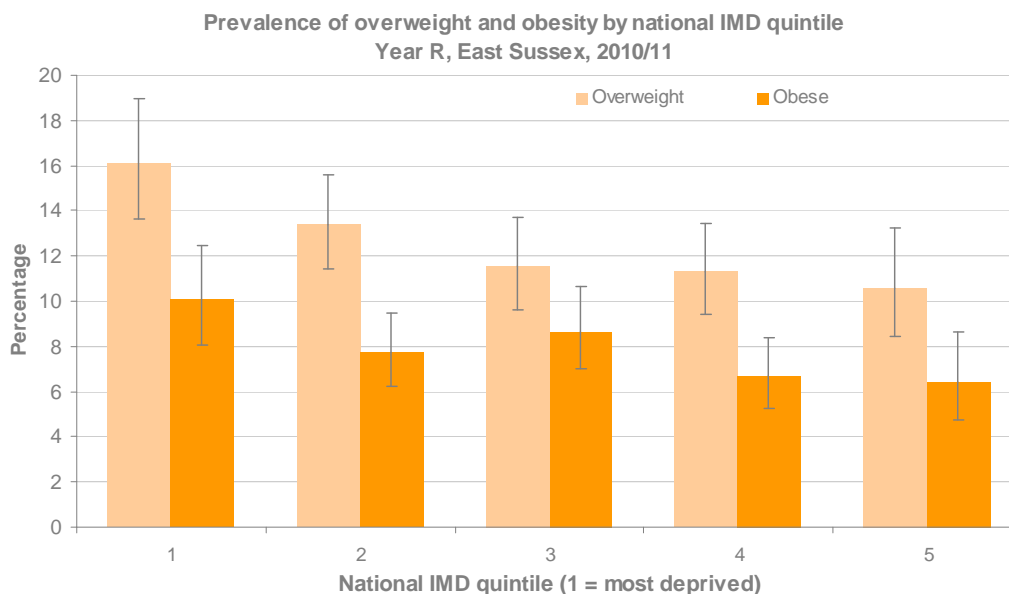

Numbers of children overweight and obese, Year 6
East Sussex local authorities

- Hastings has a significantly higher prevalence of obesity in Year 6 pupils than Wealden.

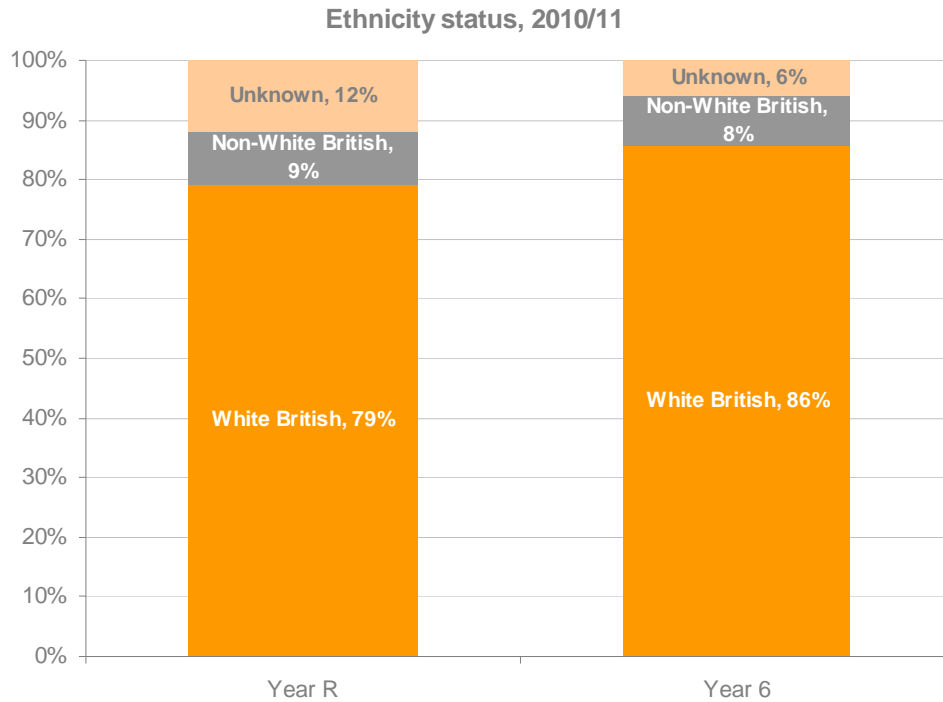

Analysis by area deprivation

East Sussex data shows that there is a significant difference between those children who live in the most deprived areas compared to those in the least deprived areas. The prevalence is significantly different for those overweight in Year R, and those obese in Year 6. As in previous years, the national dataset shows a strong positive relationship between deprivation and obesity prevalence in both year groups.

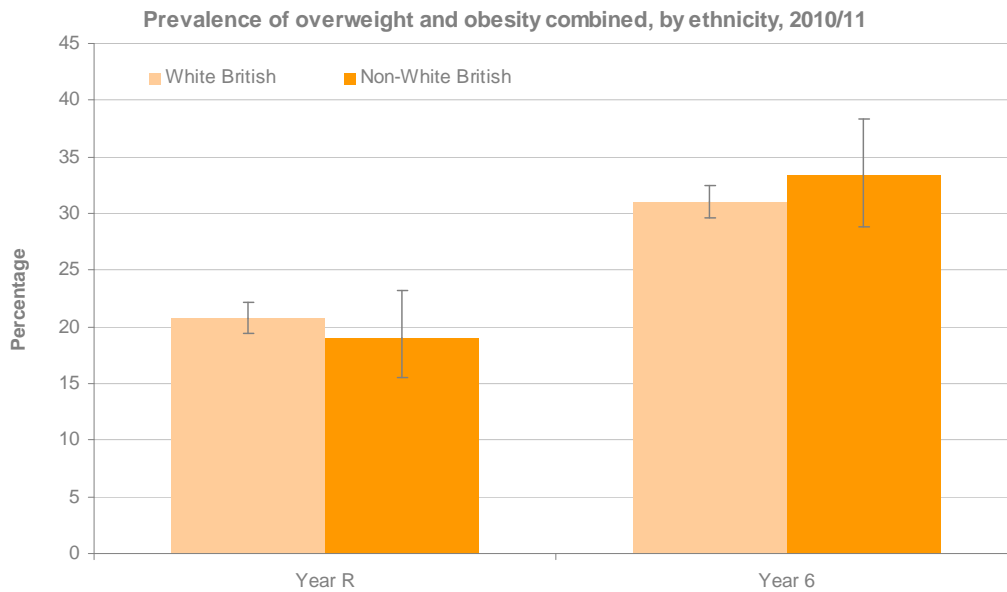

Analysis by ethnicity

Of pupils who were measured, 91% of records had a valid ethnicity code.

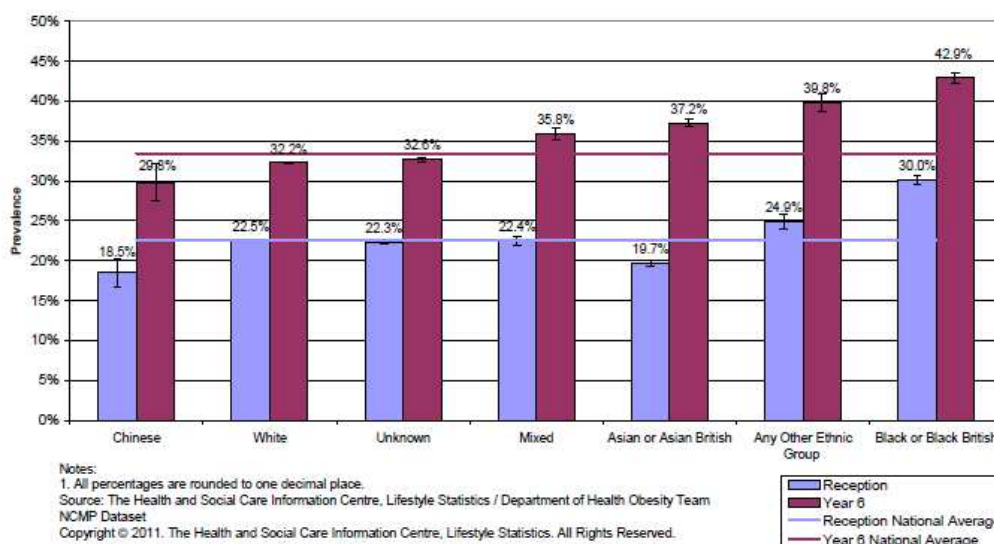

Due to small numbers it is not appropriate to breakdown ethnicity further than White British and non-White British for East Sussex.

At a national level, significant differences in the prevalence of overweight and obesity can be seen between ethnic categories.

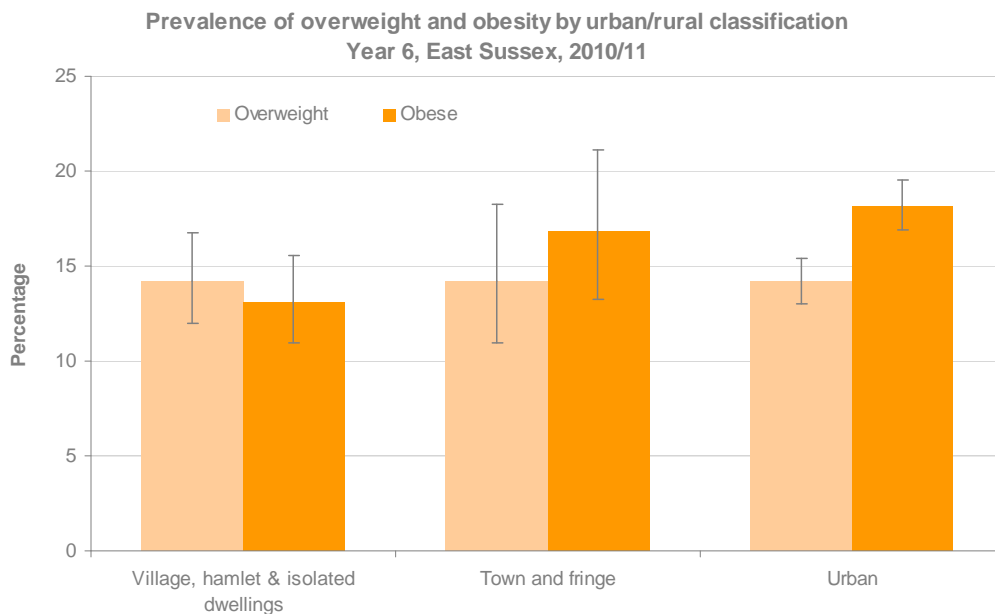

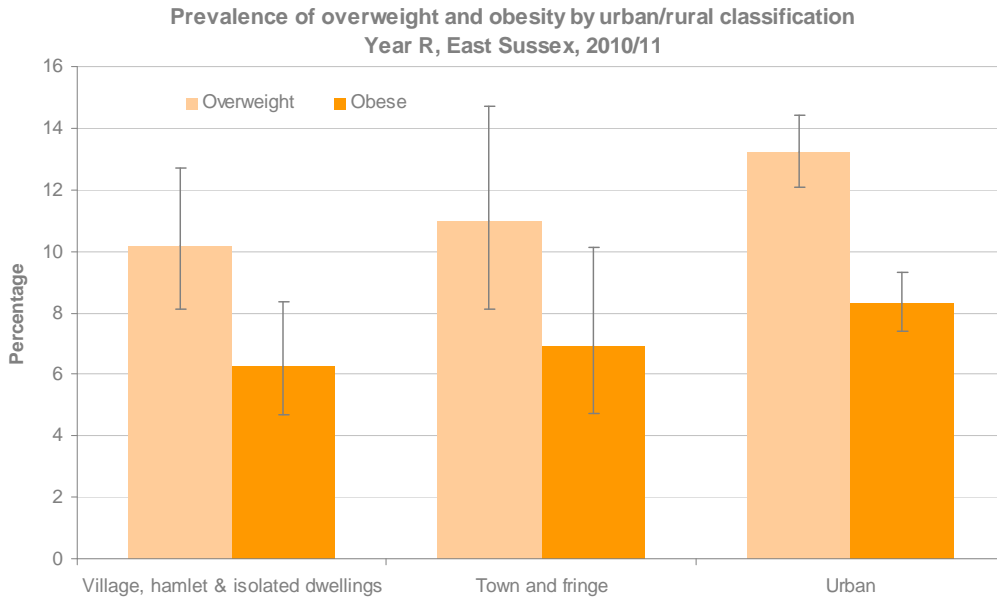

Figure 18: Prevalence of "combined overweight and obese" children, by ethnic category, England, 2010/11

- Nationally, overweight and obesity prevalence (combined) is significantly higher than the national average for children in both year groups for ‘Any Other Ethnic Group’ and ‘Black or Black British’. For children in Year 6, those in ‘Mixed’ and ‘Asian or Asian British’ ethnic groups also have significantly higher prevalences than the national average.
- Nationally, in both year groups, children in the ‘Chinese’ ethnic group have a significantly lower prevalence of obesity and overweight than the national average.

Analysis by urban/rural classification

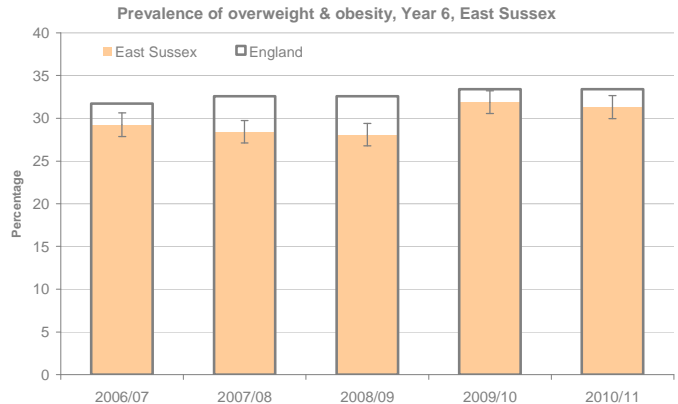

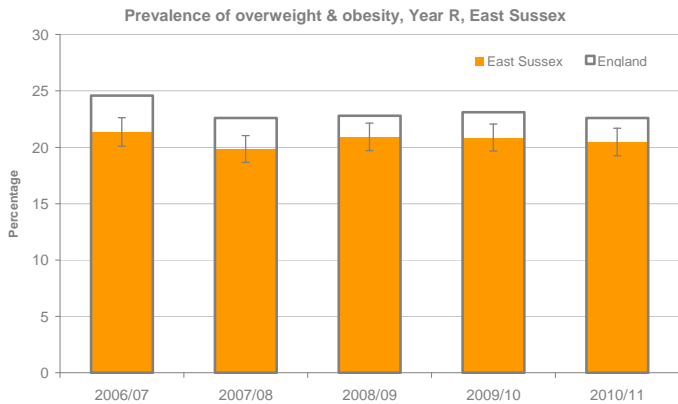

In both year groups, obesity is higher in urban areas. This is also seen in the national data, although it is important to note that there may be confounding due to the levels of deprivation and ethnic mix in urban areas.

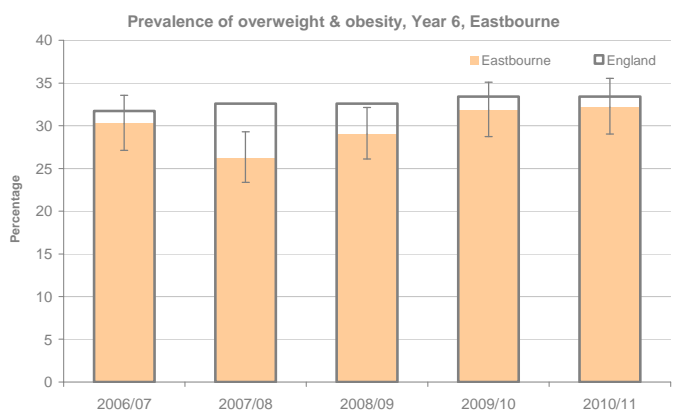

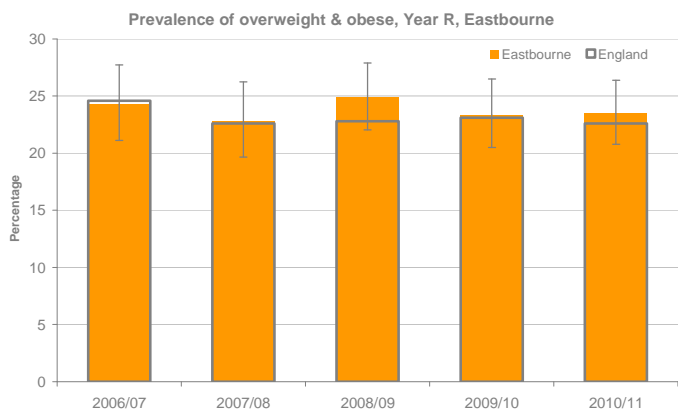

Public Health Outcomes Framework

The Public Health Outcomes Framework (DH January 2012) includes the indicator ‘excessive weight in 4-5 and 10-11 year olds’ - which is children classified as overweight or obese, using NCMP data as the source. The charts below show the indicator for each local authority compared to England, and the trend from 2006/07 to 2010/11. Note that in the earlier years there was a lower coverage of Year 6 pupils measured that is likely to have resulted in an under-representation of the proportion overweight and obese.
