4.72	First outpatient attendances (SAR), 2015/16	74,240	99
4.74	All MIU and A&E attendances (SAR), 2015/16	52,062	95
4.78	All elective admissions (SAR), 2014/15 to 2015/16	33,056	108
4.80	All emergency admissions (SAR), 2014/15 to 2015/16	19,538	100
6.01	People providing one hour or more of unpaid care per week (%), 2011 (M)	20,270	11.3

Significantly worse than East Sussex	Significantly better than East Sussex
Significantly higher than East Sussex	Significantly lower than East Sussex
Not significantly different to East Sussex	Significance not tested

# Introduction

This narrative describes Eastbourne Hailsham & Seaford CCG in the East Sussex context. It is based on 2017 JSNAA scorecard data, presented in the form of indicator tables (Appendix 1) in which East Sussex localities/communities of practice and CCGs are RAG-rated against East Sussex. Further tables and charts summarise key statistics and specific topics (such as hospital admission and attendance rates) for this CCG.

For ease of reference, throughout the rest of this area summary the term 'localities' is used to refer to the 4 HWLH CCG communities of practice as well as the 3 localities in EHS CCG and the 3 localities in HR CCG.

The RAG-rated tables highlight statistically significant differences between EHS CCG and East Sussex. Individual JSNAA scorecards are referenced alongside the indicator titles; if data has been modelled from LA to NHS geographies indicator titles are flagged with (M). For indicators where locality or CCG data is not available, values for Eastbourne Borough, Lewes District and Wealden District (based on the LA view JSNAA scorecards and area summaries) are discussed.

For more in-depth information on how GP practices, as well as localities and CCGs, compare to East Sussex, this report should be read alongside the NHS view JSNAA indicator scorecards.

Here 'significance' refers to statistical significance at the 95% confidence level.

In the tables (Appendix 1) statistically significant differences between this CCG and East Sussex are flagged in red/green and dark blue/light blue and the indicator values are given. But note that, for values based on large numbers, even small, possibly unimportant, differences can be statistically significant. Conversely, values based on small numbers can be substantially, but not (in statistical terms) significantly different to East Sussex.

Some rates are age and/or sex standardised. For those that are not, such as the GP-reported prevalence of diabetes and other chronic diseases, it is important to take into account the age profile of the population, as they are likely to be higher in areas with older age profiles.

NHS and LA view JSNAA scorecards and area summaries can be downloaded from [www.eastsussexjsna.org.uk/scorecards](http://www.eastsussexjsna.org.uk/scorecards).

The following products can also be downloaded from the East Sussex JSNAA website:

### **GP Practice Profiles and Locality/Community of Practice Profiles**

Spine charts are used to compare the GP practice or locality/community of practice to East Sussex for all available JSNAA indicators.

See <http://www.eastsussexjsna.org.uk/PracticeProfiles2017>

### **Local Needs and Assets Profiles**

East Sussex, its districts/boroughs and CCGs are compared to England. RAG-rated tables similar to those in Appendix 1 (but with England as the benchmark) are included.

See <http://www.eastsussexjsna.org.uk/overviews/localneedsprofile.aspx>

# Population

**Eastbourne, Hailsham & Seaford age profile, 2015**  
**Total population 192,396**

EHS CCG has the largest population of all East Sussex CCGs. Within the CCG, Eastbourne has the largest and Seaford has the smallest population of all East Sussex localities. This CCG has the highest percentage of older people and the lowest percentage of younger people of the 3 East Sussex CCGs. Seaford has the lowest percentage of younger people and one of the highest percentages of older people of all East Sussex localities.

The dependency ratio (of non-working age people compared to working age people) for the CCG is significantly higher than for East Sussex. Hailsham & Polegate and Seaford have significantly higher (and amongst the highest) dependency ratios of all East Sussex localities whereas Eastbourne has a significantly lower dependency ratio than East Sussex.

The CCG is significantly higher than East Sussex and the highest of all CCGs for non-white British people and children who speak English as an additional language. Eastbourne is

significantly higher (and the highest of all East Sussex localities) whereas Hailsham & Polegate and Seaford are significantly lower than East Sussex.

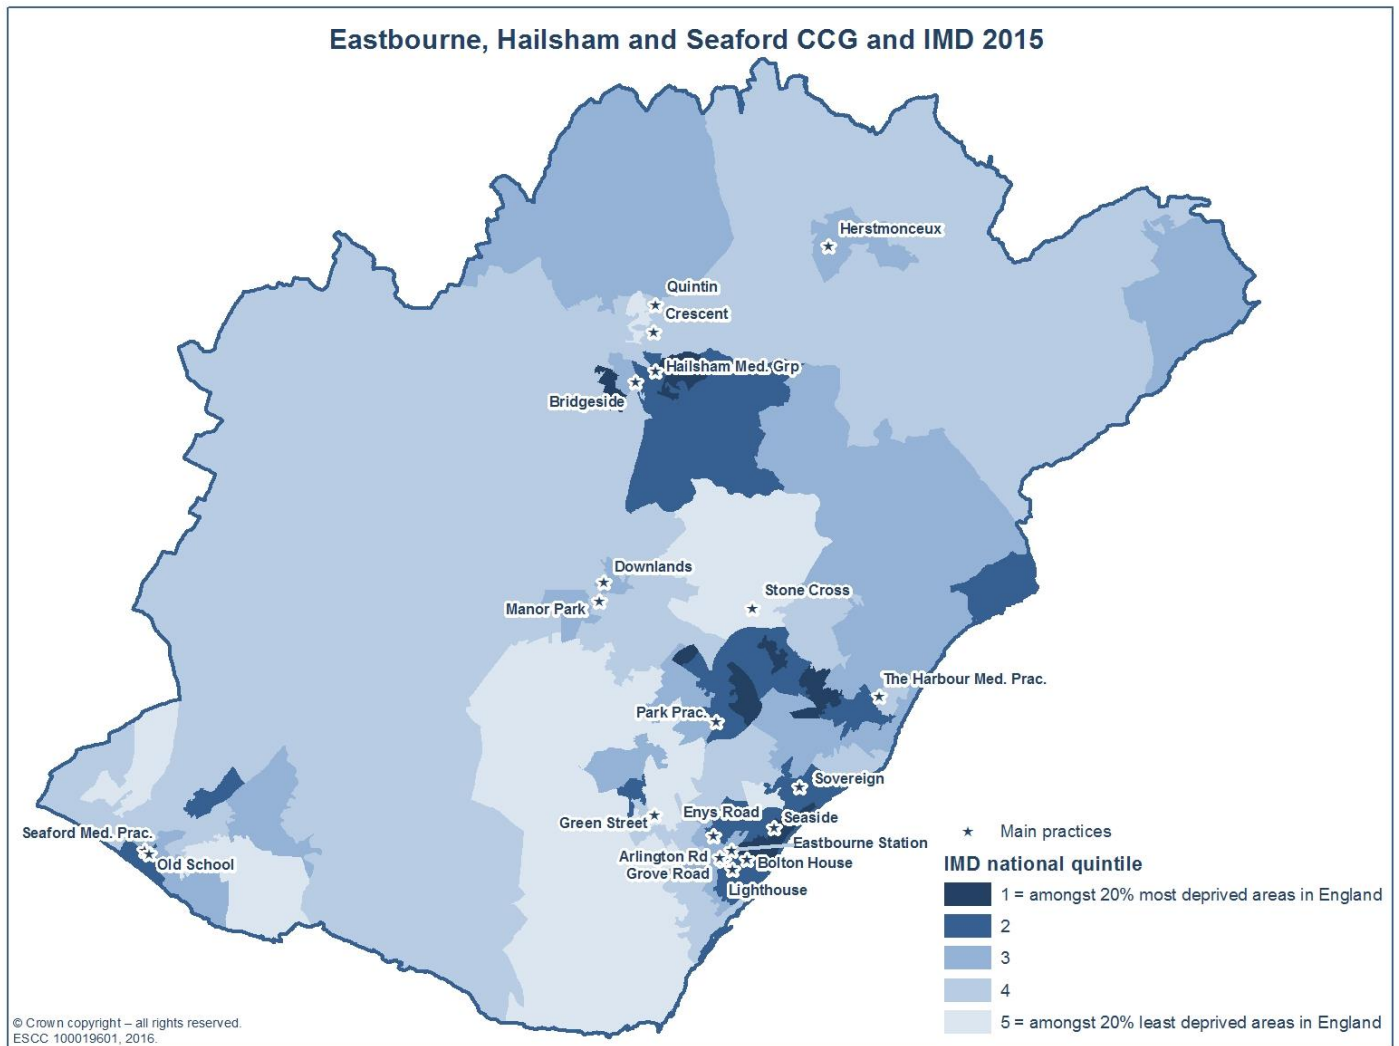

The CCG has similar birth rates to East Sussex, but Eastbourne has the second highest rate of births to teenage mothers, and Hailsham & Polegate has the highest overall birth rate, of all East Sussex localities.

Table 1 shows the estimated population changes between 2015 and 2021 for specific age groups as well as all ages. Using projections modelled from East Sussex districts and boroughs, the table shows that over the next 6 years some age groups are projected to increase in size whilst others will decrease in size. The net effect is that the population of the CCG is estimated to increase, with the largest estimated increase in those aged 85 years and over.

**Table 1: Population projections for all persons (number and percentage change) showing the increase (positive) or decrease (negative) from 2015 to 2021 (modelled)**

Population projections from 2015 to 2021				
Population Change	East Sussex		Eastbourne Hailsham and Seaford CCG	
	Number	%	Number	%
0-19 years	900	0.8%	100	0.3%
20-64 years	-2,100	-0.7%	-1,200	-1.2%
65+ years	14,600	11.0%	5,200	10.4%
85+ years	3,200	15.8%	1,350	15.7%
All Ages	13,500	2.6%	3,900	2%

## Wider determinants

The CCG has similar income and employment deprivation to East Sussex, including children in low-income families and income deprivation affecting older people. Income and employment deprivation is significantly lower in Hailsham & Polegate and Seaford than in East Sussex but significantly higher in Eastbourne. This CCG and each of its localities has significantly lower percentages of households in fuel poverty than East Sussex. The CCG has similar percentages of working age people claiming ESA, JSA and UC to East Sussex. But Eastbourne locality has significantly higher rates than East Sussex whereas Hailsham & Polegate and Seaford have significantly lower rates. Eastbourne has a similar rate to East Sussex of children receiving the pupil premium whereas Hailsham & Polegate and Seaford have significantly lower rates.

Compared to East Sussex, this CCG and its localities have similar levels of educational achievement for pupils at ages 5, 11 and 16, except for pupils aged 11 years, where Seaford has the highest of all East Sussex localities.

Compared to East Sussex, Hailsham & Polegate has a significantly higher percentage of working age people with no or low qualifications whereas the other localities have significantly lower. The CCG and Eastbourne locality have significantly lower rates of children with SEN on SEN Support.

The CCG has similar levels of households that are owner-occupied and households that are rented to East Sussex. But Hailsham & Polegate and Seaford have significantly more households that are owned and significantly less that are rented. Eastbourne on the other hand has significantly less that are owned and significantly more that are rented. The CCG has a significantly higher percentage of overcrowded households than East Sussex, with Eastbourne having significantly higher overcrowding but the other localities significantly lower. The CCG has a significantly lower percentage of households with no central heating than East Sussex, but the levels are lower in Hailsham & Polegate and Seaford than in Eastbourne locality.

Compared to East Sussex, this CCG has significantly higher A&E attendances due to assaults, but similar levels of recorded crimes, recorded incidents of anti-social behaviour and emergency admissions for violence. Hailsham & Polegate and Seaford localities are similar to East Sussex or significantly better for all crime indicators, however Eastbourne is significantly worse for recorded crimes and incidents of anti-social behaviour, and A&E attendances due to assault.

## Overall health status

EHS CCG and its localities are broadly similar to East Sussex in terms of overall health status. Seaford locality has the highest self-reported LLTI or disability in the CCG but the lowest premature and preventable mortality. This CCG has the highest infant mortality (based on very small numbers) of the three CCGs.

# Healthy lifestyles

## Pregnancy and infancy

EHS CCG is broadly similar to East Sussex for these indicators. Seaford is the only locality in the CCG with significantly higher breastfeeding rates than East Sussex.

## Physical activity and excess weight

It has similar levels of overweight or obese reception year and year 6 children to East Sussex, but within the CCG Eastbourne locality is worst and Seaford is best. Seaford has the lowest percentage of overweight/obese reception year children of all East Sussex localities. Eastbourne Borough and Lewes District have similar levels of adults achieving 150 minutes physical activity per week and overweight or obese adults to East Sussex.

## Smoking

This CCG has similar levels of smokers and smoking quitters to East Sussex. However Seaford has significantly lower rates than East Sussex of mothers who are current smokers at the time of delivery and Hailsham & Polegate has significantly lower smoking quit rates. Eastbourne Borough has somewhat higher, and Lewes District somewhat lower, smoking-attributable mortality than East Sussex.

## Alcohol and drug misuse

This CCG is broadly similar to East Sussex for these substance misuse indicators, but Eastbourne locality has significantly higher rates of adults in drug treatment whereas the other two localities have significantly lower. Eastbourne locality also has significantly higher alcohol-related hospital admissions whereas Hailsham & Polegate has significantly lower.

## Sexual health

In this CCG the chlamydia and gonorrhoea detection rates are similar to the East Sussex rates. In Eastbourne Borough they are similar, in Lewes District they are similar or somewhat lower (except significantly higher for gonorrhoea detection), and in Wealden District they are lower. Under 18 conception rates are similar to East Sussex in Eastbourne Borough and lower in Lewes and Wealden districts.

## Accidents and injuries

The A&E attendance and emergency admissions rate for accidents and injuries in 0-4 year olds is similar to East Sussex. But these A&E attendance rates are significantly higher in Eastbourne locality and significantly lower in Seaford than in East Sussex, whereas admission rates are similar to East Sussex in all three localities. Both for older children and for young people, emergency admission rates for accidents and injuries in this CCG are significantly lower than in East Sussex. For older children this is the case in Eastbourne and Seaford localities and for young people this is the case in Eastbourne and Hailsham & Polegate. The emergency admissions rate for falls injuries in older people is similar to the East Sussex rate. Eastbourne Borough has a significantly lower rate of people killed or seriously injured on the roads and the lowest rate of all the districts and boroughs whereas for Lewes District the rate is not significantly different to East Sussex.

## Health protection

This CCG is significantly better than East Sussex for eligible people receiving an NHS health check. Eastbourne and Seaford localities are significantly better than East Sussex but Hailsham & Polegate is significantly worse. The CCG has similar uptake of screening for cervical, breast and bowel cancers to East Sussex. But uptake is significantly worse in Eastbourne and significantly better for the rest of the CCG, except for bowel cancer screening in Hailsham & Polegate where it is similar to East Sussex.

Hailsham & Polegate has either significantly worse or similar uptake to East Sussex for immunisations, and the rest of the CCG is either similar or significantly better.

## Disease and poor health

### Mental health and wellbeing

For most of these indicators the CCG is similar to East Sussex. But this CCG has the highest incidence of depression and the highest prevalence of dementia (not age-standardised) of all East Sussex CCGs. The high incidence of depression is driven by Eastbourne, which has a significantly higher incidence than East Sussex and the highest of all localities. Within the CCG the incidence is lowest in Seaford (where it is significantly lower

than East Sussex). The prevalence of severe mental illness is significantly lower in Hailsham & Polegate but similar to East Sussex in the rest of the CCG. Eastbourne locality has significantly higher rates of working age people claiming ESA due to mental health problems than East Sussex but rates are significantly lower in the rest of the CCG. Compared to East Sussex, the prevalence of dementia (not age-standardised) is significantly higher in all three localities, but emergency admissions for persons with dementia are similar.

## **Circulatory**

The CCG has significantly higher prevalences (not age-standardised) than East Sussex of most circulatory conditions. This is because Hailsham & Polegate and Seaford localities have significantly higher prevalences (not age-standardised) than East Sussex. However, emergency admissions and mortality for circulatory diseases are similar to East Sussex across the CCG.

## **Cancer**

Premature mortality due to cancer is similar to East Sussex. The CCG has similar incidence and mortality to East Sussex for lung, colorectal, breast and prostate cancers.

## **Respiratory**

The CCG has a significantly higher prevalence of asthma (not age-standardised) than East Sussex. In Eastbourne, but not the other two localities, emergency admissions for asthma are significantly higher. Hailsham & Polegate has a significantly higher prevalence of COPD (not age-standardised) and Seaford has significantly lower emergency admissions due to COPD. Mortality from respiratory conditions is similar to East Sussex.

## **Diabetes**

The CCG has a similar prevalence of diabetes (not age-standardised) and emergency admissions for diabetes compared to East Sussex. In Hailsham & Polegate and Seaford localities, the prevalence of diabetes is significantly higher than in East Sussex, and in Seaford emergency admissions for diabetes are significantly higher.

## Other chronic conditions

Across the CCG the prevalence of CKD (not age-standardised) is significantly higher than in East Sussex.

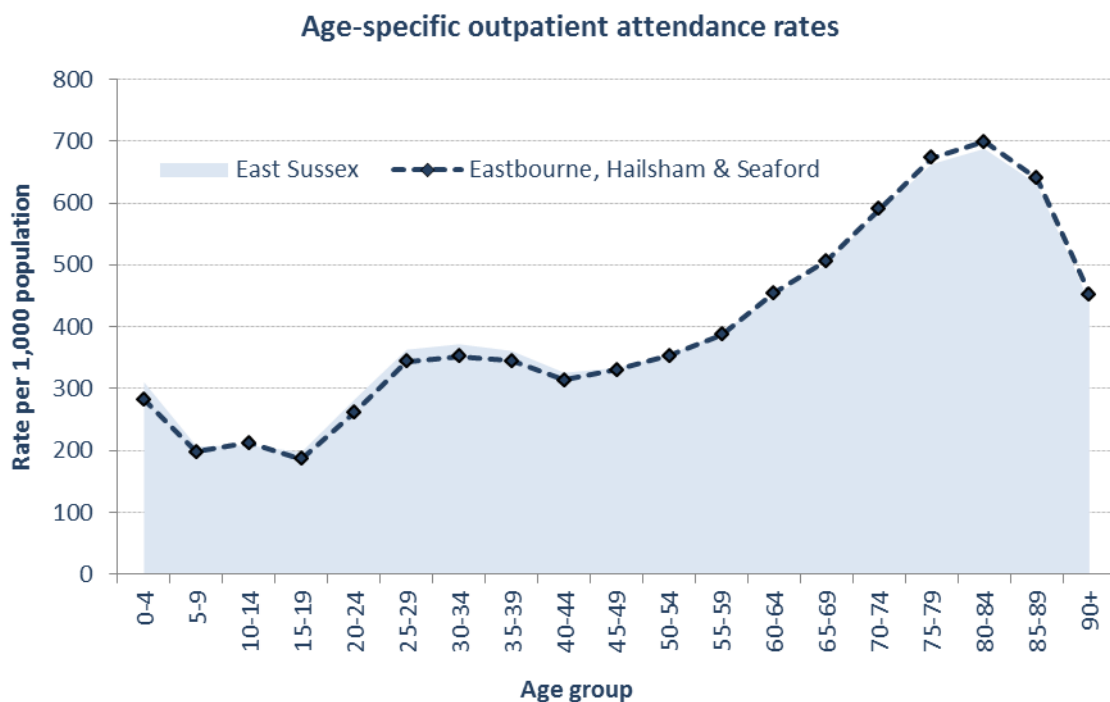

## Avoidable admissions

This CCG has the highest emergency admissions for acute ACS conditions (significantly higher than East Sussex) and for diabetes/epilepsy/asthma in under 20s. This is because Eastbourne has the highest emergency admissions for acute ACS conditions and for diabetes/epilepsy/asthma in under 20s of all East Sussex localities, and in both cases significantly higher than East Sussex.

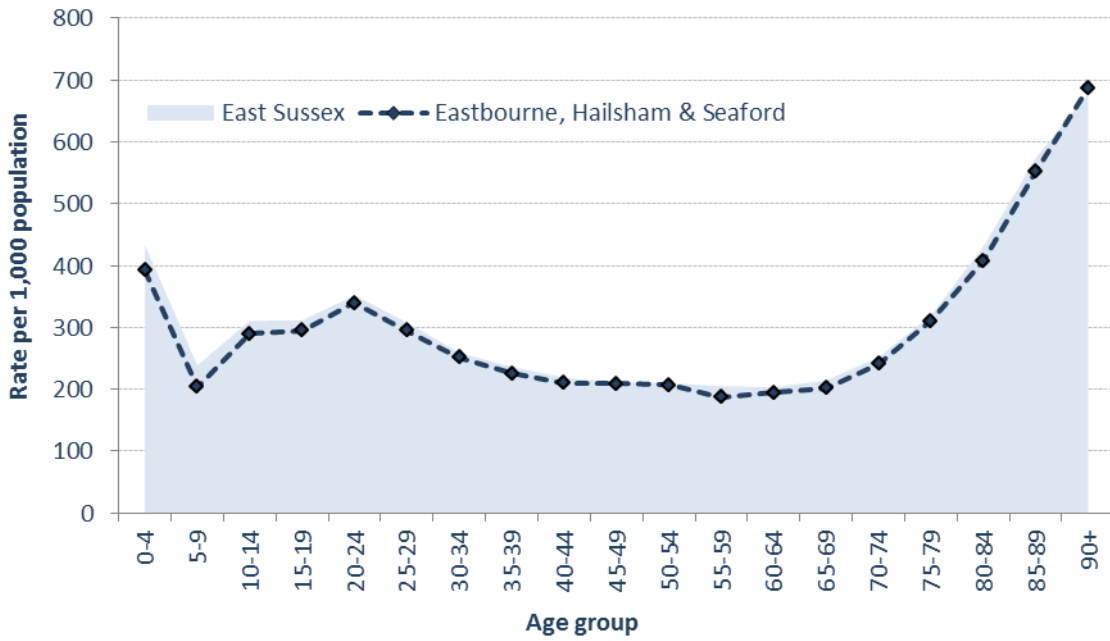

## Hospital admissions and attendances

MIU/A&E attendances are significantly lower across the CCG for all ages. Elective admissions are significantly higher across the CCG and emergency admissions are similar to East Sussex for the CCG overall, but significantly higher in Eastbourne locality.

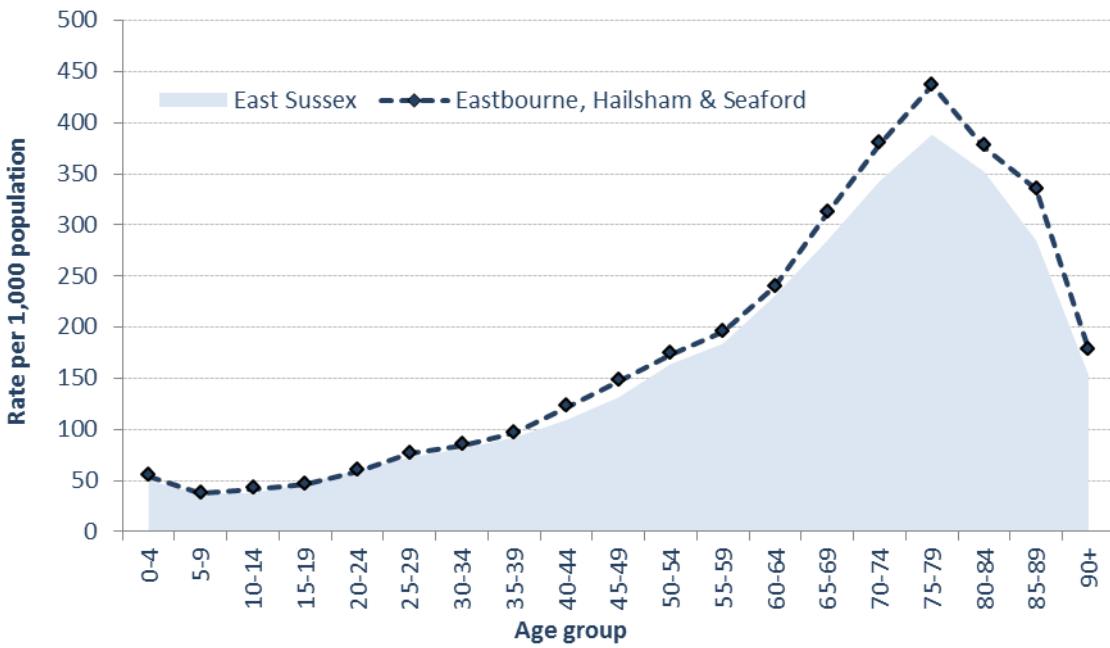

The following graphs present the age-specific overall attendance and admission rates for the CCG compared to East Sussex.

### Age-specific A&E/MIU attendance rates

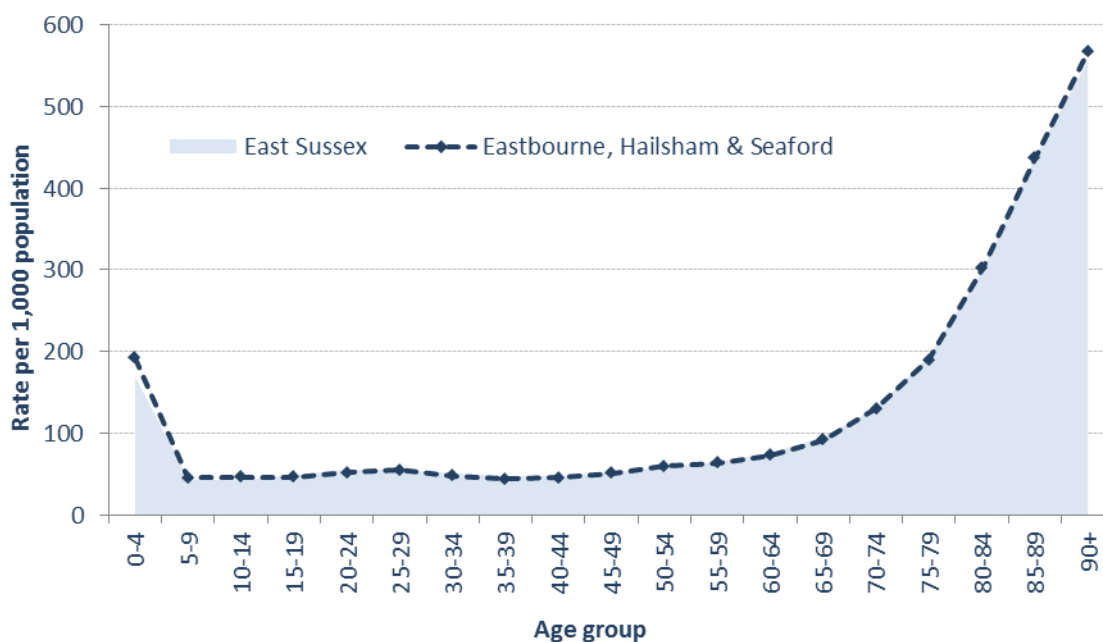

### Age-specific elective admission rates

Age-specific emergency admission rates

## Social care

### Children's services

The CCG is similar to East Sussex for referrals to children's social care, children on child protection plans and looked after children. Eastbourne locality is significantly higher for looked after children.

### Carers

Compared to East Sussex Eastbourne is slightly lower for people providing one hour or more of unpaid care per week and Seaford is slightly higher. Seaford is significantly lower for unpaid carers providing 20 hours or more care per week and Eastbourne is significantly higher. Seaford is significantly lower for working age people claiming Carers Allowance. Across the CCG carers known to adult social care and those receiving a service or receiving self-directed support are all similar to East Sussex.

### Adult social care

Compared to East Sussex, requests for ASC support are significantly higher in Hailsham & Polegate and Seaford. The rate of adults receiving direct payments is significantly lower in

Seaford and the rate of older people receiving long term support is significantly higher in Eastbourne and Hailsham & Polegate. Rates of adults receiving ASC funded lifeline or telecare are significantly higher across the CCG.

## **NHS dental services**

Compared to East Sussex, a significantly higher percentage of children in Seaford, and residents of all ages in Hailsham & Polegate, but significantly lower percentages of older people in Eastbourne, access East Sussex NHS general dental services.

## **GP patient survey**

In Hailsham & Polegate and Seaford the percentage of patients responding to the GP Patient Survey is significantly higher than in East Sussex. The percentage of patients reporting a good experience of making appointments and satisfaction with opening hours is significantly better in Eastbourne and significantly worse in Hailsham & Polegate. Seaford is also significantly better for patients reporting a good experience of their surgery and that GPs involve them in decisions on care.

## Appendix 2: Acronyms and abbreviations

A&E	Accident and Emergency
ACS	Ambulatory Care Sensitive
AF	Atrial Fibrillation
ASC	Adult Social Care
BP	Blood Pressure
CAMHS	Child and Adolescent Mental Health Services
CCG	Clinical Commissioning Group
CHD	Coronary Heart Disease
CKD	Chronic Kidney Disease
COPD	Chronic Obstructive Pulmonary Disease
CV	Cardiovascular
CVD	Cardiovascular Disease
DM	Diabetes Mellitus (used for diabetes QOF clinical domain)
DNA	Did Not Attend
DSR	Directly Standardised Rate
DTaP/IPV/Hib	Diphtheria, tetanus, pertussis (whooping cough), polio and Haemophilus influenzae type b (also known as the 5 in 1 vaccine)
EHCP	Education, Health and Care Plan
EHS	Eastbourne, Hailsham and Seaford
ESA	Employment and Support Allowance
EYFS	Early Years Foundation Stage
Hib	Haemophilus influenzae type b
HIV	Human Immunodeficiency Virus
HR	Hastings and Rother
HWLH	High Weald Lewes Havens
ID	Income Deprivation
ID 2015	Indices of Deprivation, 2015
IDACI	Income Deprivation Affecting Children Index
IDAOPi	Income Deprivation Affecting Older People Index
IMD	Index of Multiple Deprivation
JSA	Job Seekers Allowance
LD	Learning Disability
LRTI	Lower Respiratory Tract Infection
LSOA	Lower Super Output Area
MenC	Meningococcal C conjugate
MH	Mental Health
MIU	Minor Injury Unit
MMR	Measles, mumps and rubella
MRC	Medical Research Council
NEET	Not in Education, Employment or Training
PAD	Peripheral Arterial Disease
PCV	Pneumococcal conjugate vaccine
PHOF	Public Health Outcomes Framework

PPV	Pneumococcal polysaccharide vaccine
QOF	Quality and Outcomes Framework
RAG	Red Amber Green
RCP	Royal College of Physicians
SAR	Standardised Attendance Ratio/ Standardised Admissions Ratio
SEN	Special Educational Needs
SMR	Standardised Mortality Ratio
STIs	Sexually Transmitted Infections
UC	Universal Credit
