Significantly worse than East Sussex	Significantly better than East Sussex
Significantly higher than East Sussex	Significantly lower than East Sussex
Not significantly different to East Sussex	Significance not tested

Introduction

This narrative describes High Weald Lewes Havens CCG in the East Sussex context. It is based on 2017 JSNAA scorecard data, presented in the form of indicator tables (Appendix 1) in which East Sussex localities/communities of practice and CCGs are RAG-rated against East Sussex. Further tables and charts summarise key statistics and specific topics (such as hospital admission and attendance rates) for this CCG.

For ease of reference, throughout the rest of this area summary the term 'localities' is used to refer to the 4 HWLH CCG communities of practice as well as the 3 localities in EHS CCG and the 3 localities in HR CCG.

The RAG-rated tables highlight statistically significant differences between HWLH CCG and East Sussex. Individual JSNAA scorecards are referenced alongside the indicator titles; if data has been modelled from LA to NHS geographies indicator titles are flagged with (M). For indicators where community of practice or CCG data is not available, values for Lewes District and Wealden District (based on the LA view JSNAA scorecards and area summaries) are discussed.

For more in-depth information on how GP practices, as well as communities of practice and the CCG, compare to East Sussex, this report should be read alongside the NHS view JSNAA indicator scorecards.

Here 'significance' refers to statistical significance at the 95% confidence level.

In the tables (Appendix 1) statistically significant differences between this CCG and East Sussex are flagged in red/green and dark blue/light blue and the indicator values are given. But note that, for values based on large numbers, even small, possibly unimportant, differences can be statistically significant. Conversely, values based on small numbers can be substantially, but not (in statistical terms) significantly different to East Sussex.

Some rates are age and/or sex standardised. For those that are not, such as the GP-reported prevalence of diabetes and other chronic diseases, it is important to take into account the age profile of the population, as they are likely to be higher in areas with older age profiles.

NHS and LA view JSNAA scorecards and area summaries can be downloaded from www.eastsussexjsna.org.uk/scorecards.

The following products can also be downloaded from the East Sussex JSNAA website:

GP Practice Profiles and Locality/Community of Practice Profiles

Spine charts are used to compare the GP practice or locality/community of practice to East Sussex for all available JSNAA indicators.

See <http://www.eastsussexjsna.org.uk/PracticeProfiles2017>

Local Needs and Assets Profiles

East Sussex, its districts/boroughs and CCGs are compared to England. RAG-rated tables similar to those in Appendix 1 (but with England as the benchmark) are included.

See <http://www.eastsussexjsna.org.uk/overviews/localneedsprofile.aspx>

Population

High Weald Lewes Havens age profile, 2015
Total population 166,288

This CCG has the smallest population of all three CCGs. It has a significantly lower percentage of over 65 year olds than in East Sussex and a significantly higher percentage of under 65 year olds. This is generally reflected across most communities of practice in the CCG.

The dependency ratio (of non-working age people compared to working age people) is significantly lower than for East Sussex. Within the CCG, Crowborough has a similar dependency ratio to East Sussex but the other communities of practice have significantly lower dependency ratios than East Sussex. The CCG and all its communities of practice have significantly lower percentages of older people living alone than East Sussex.

The CCG is significantly lower for non-white British people and children who speak English as an additional language. This is the case for all its communities of practice except Havens, which is similar to East Sussex for children who speak English as an additional language.

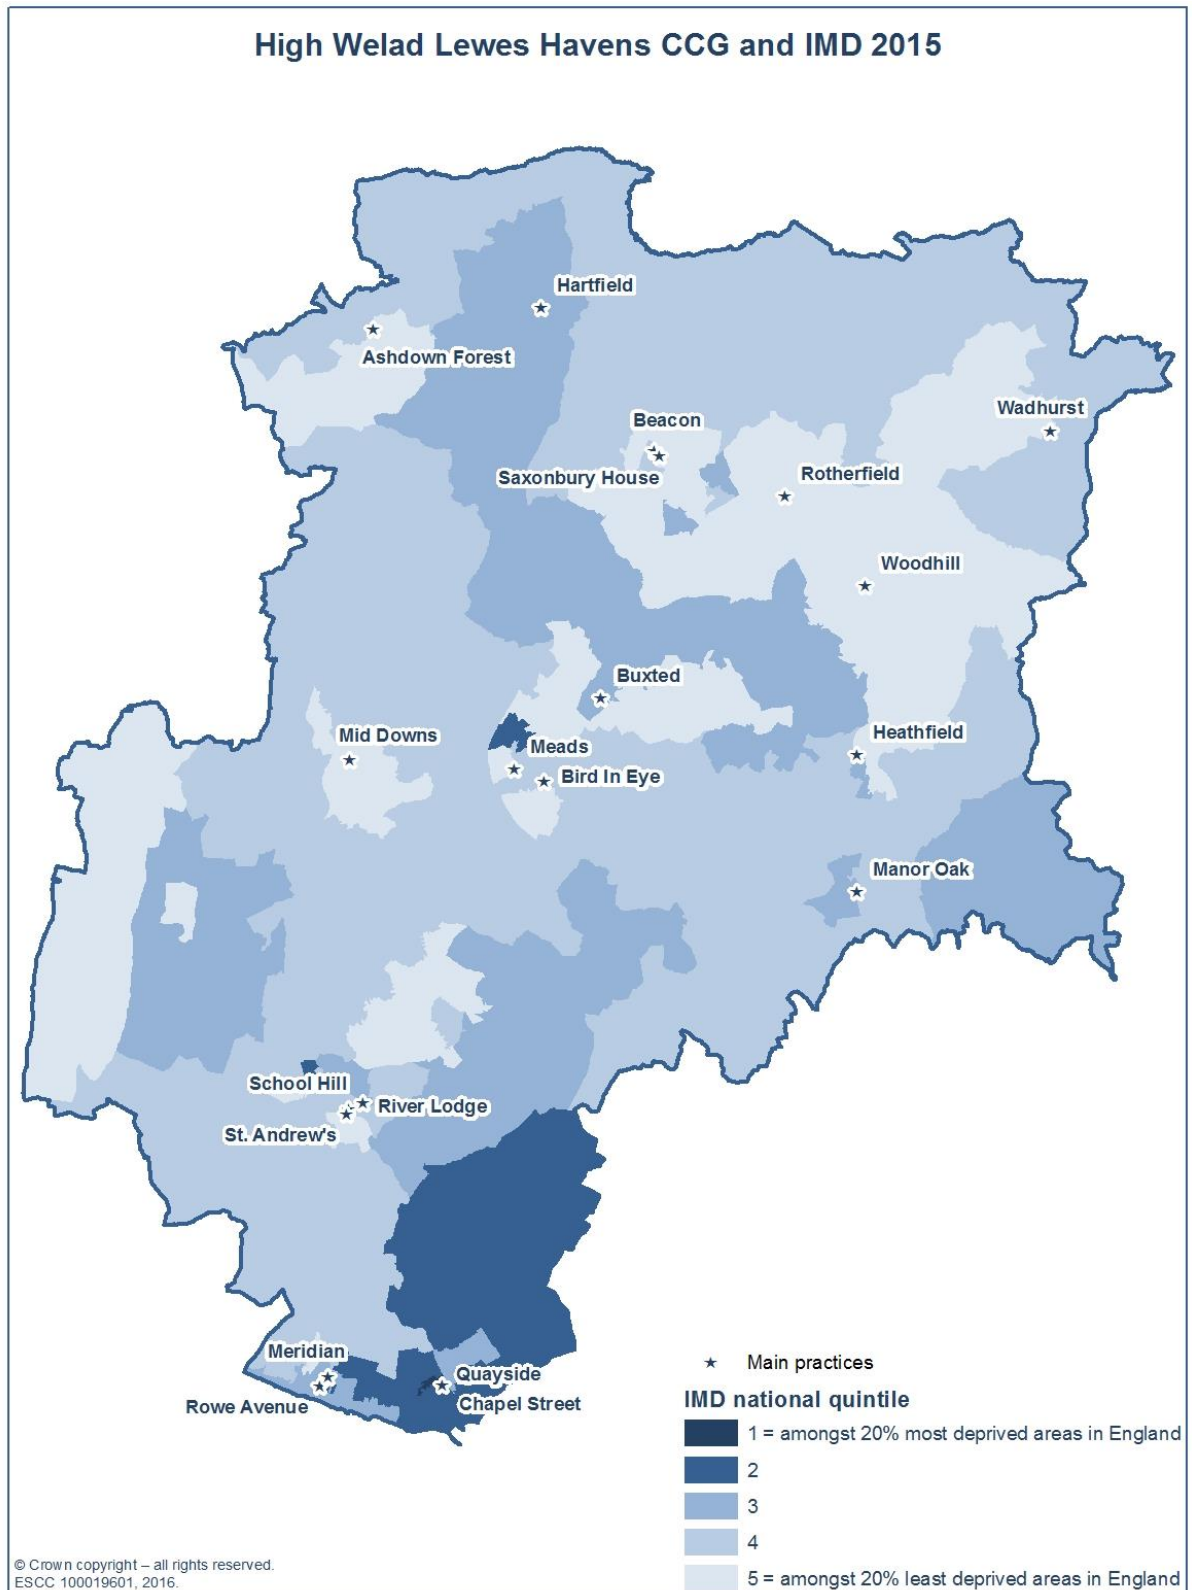

Compared to East Sussex, the CCG has a significantly lower overall birth rate and rate for teenage mothers than East Sussex and the lowest of the three CCGs. All its communities of practice except Havens have significantly lower birth rates to teenage mothers than East Sussex. Havens is the only community of practice in the CCG with a significantly higher overall birth rate than East Sussex. The CCG has significantly lower lone parent households than East Sussex, but Havens has amongst the highest of all East Sussex localities.

Table 1 shows the estimated population changes between 2015 and 2021 for specific age groups as well as all ages. Using projections modelled from East Sussex districts and boroughs, the table shows that over the next 6 years some age groups are projected to increase in size whilst others will decrease in size. The net effect is that the population of the CCG is estimated to increase, with the largest estimated increase in those aged 85 years and over.

Table 1: Population projections for all persons (number and percentage change) showing the increase (positive) or decrease (negative) from 2015 to 2021 (modelled)

Population projections from 2015 to 2021				
Population Change	East Sussex		High Weald Lewes Havens CCG	
	Number	%	Number	%
0-19 years	900	0.8%	1,000	2.8%
20-64 years	-2,100	-0.7%	700	0.7%
65+ years	14,600	11.0%	4,700	12.5%
85+ years	3,200	15.8%	1,200	23.8%
All Ages	13,500	2.6%	6,900	4.2%

Wider determinants

The CCG has the lowest income and employment deprivation of all East Sussex CCGs, including deprivation affecting children and older people. Most communities of practice within the CCG have significantly lower deprivation than East Sussex, with Crowborough having the lowest of all East Sussex localities. But Havens has significantly higher income and employment deprivation and amongst the highest rates of income deprivation and pupils receiving the pupil premium of all East Sussex localities. The other communities of practice in the CCG have the lowest rates of all East Sussex localities for pupils receiving the pupil premium. Lewes has significantly higher fuel poverty than East Sussex but all the other communities of practice have significantly lower. The CCG is significantly lower than East Sussex for households without a car or van and for households that are able to access a GP practice within 15mins by public transport or walking. This picture is reflected in all its communities of practice except Havens where similar levels of households as in East Sussex are without a car or van, but significantly higher percentages are able to access a GP practice within 15mins by public transport or walking.

This CCG has the lowest rates of working age people claiming ESA, JSA and UC, and working age people with no or low qualifications. This picture is reflected in all its communities of practice except for Havens which has similar rates of ESA, JSA and UC claimants and significantly higher rates of people with no or low qualifications, than East Sussex. The CCG and its communities of practice have similar levels of educational achievement to East Sussex for pupils at age 5, 11 and 16, except for Havens which is significantly worse, and the worst of all East Sussex localities, for pupils reaching a good level of development in the EYFS.

The CCG has similar rates to East Sussex of children with SEN on SEN Support, SEN or an EHCP, and significantly lower rates of young people NEET. Crowborough has the lowest rates of all East Sussex localities for these indicators, but Havens has amongst the highest.

Compared to East Sussex, this CCG is significantly lower for households that are rented and significantly higher for households that are owned. There are also significantly lower levels of overcrowded households and households with no central heating, as well as people living in care homes. For most of these indicators this picture is reflected across the communities of practice, except for Lewes which is the highest of all East Sussex localities for socially rented households.

This CCG has the lowest rates of recorded crimes, anti-social behaviour, attendances due to assaults and emergency admissions due to violence, of all East Sussex CCGs. Uckfield ranks lowest, or amongst the lowest, of all East Sussex localities for these indicators.

However Havens ranks the highest (but is only significantly higher than East Sussex for attendances due to assaults), or amongst the highest, of all East Sussex localities.

Overall health status

Self-reported ill-health and LLTI or disability, life expectancy, and premature and preventable mortality, are all significantly better than for East Sussex and the best of the three CCGs. Lewes and Crowborough have the best life expectancy and premature and preventable mortality of all East Sussex localities, whereas Havens has the second worst premature and preventable mortality. Uckfield has the lowest life expectancy at age 75 of all localities.

Healthy lifestyles

Pregnancy and infancy

This CCG has the lowest rates of low birth weight babies and the highest rates of mothers initiating breastfeeding and breastfeeding at 6-8 weeks. All communities of practice in the CCG except Havens have significantly higher breastfeeding rates than East Sussex and Lewes has the best of all East Sussex localities. Uckfield has the lowest rate of low birth weight babies of all localities.

Physical activity and excess weight

It has the lowest rates of overweight or obese reception year and year 6 children (in year 6 significantly lower than East Sussex). Rates are significantly lower for both year groups in Crowborough and second lowest of all localities, and lowest for year 6 children in Lewes. Wealden District has the highest levels of adults achieving 150 minutes physical activity per week, and the lowest levels of overweight or obese adults, of all districts/boroughs, whereas in Lewes District the levels are similar to East Sussex.

Smoking

This CCG has the lowest levels of smokers and smoking quitters, and significantly lower than East Sussex. Crowborough, Lewes and Uckfield have low levels, and Crowborough has the lowest of all East Sussex localities. But Havens has the highest rate of smoking quitters and second highest rate of adult smokers of all East Sussex localities. Lewes District has

somewhat lower and Wealden has the lowest smoking-attributable mortality (significantly lower than East Sussex) of all the districts/boroughs.

Alcohol and drug misuse

This CCG has significantly lower rates of young people and adults in treatment than East Sussex, with levels similar to East Sussex in Havens and lowest of all in Crowborough. Alcohol-related hospital admissions are also significantly lower.

Sexual health

It has the lowest chlamydia detection rate and the highest gonorrhoea detection rate of the three CCGs. Lewes and Wealden are the two districts/boroughs in East Sussex with the lowest chlamydia detection rates, but Lewes District has the highest (significantly higher than East Sussex) gonorrhoea detection rate. These two districts also have the lowest under 18s conception rates.

Accidents and injuries

A&E attendances and emergency admissions for accidents and injuries in 0-4 year olds are significantly lower than for East Sussex and the lowest of the three CCGs. In general communities of practice in this CCG have amongst the lowest rates of all East Sussex localities. Emergency admissions for 5-14 year olds are the highest of all the CCGs. This is driven by Lewes having the highest rate of all localities and significantly higher than East Sussex. Emergency admissions for falls injuries in older people are similar to East Sussex, but, although this is the case in Havens and Uckfield, Crowborough has the highest rate and Lewes has the lowest of all East Sussex localities. Wealden District has a significantly higher rate of people killed or seriously injured on the roads than East Sussex whereas the rate for Lewes District is not significantly different.

Health protection

For all communities of practice in the CCG the rates of eligible people receiving an NHS health check are significantly worse than for East Sussex. The uptake of screening for cancers is either significantly better or similar to East Sussex except for cervical cancer screening in Crowborough and bowel cancer screening in Havens, where it is significantly worse.

Across most immunisations Crowborough has significantly lower uptake than East Sussex. In Havens, Lewes and Uckfield child immunisation is either significantly better or similar to East Sussex, except for immunisation by age 1 in Lewes which is significantly worse. The uptake of vaccinations by persons aged 65 years or over is significantly worse across the CCG except for uptake of PPV in Havens, which is significantly better than for East Sussex.

Disease and poor health

Mental health and wellbeing

This CCG is the best of the three CCGs for all mental health and wellbeing indicators and in most cases significantly better than East Sussex. Compared to East Sussex the incidence of depression is significantly higher in Havens but significantly lower in the rest of the CCG. The prevalence of severe mental illness in all its communities of practice is either similar to East Sussex or significantly lower. Emergency admissions for persons with severe mental illness and for self-harm are significantly higher in Havens but generally significantly lower for the rest of the CCG. The prevalence of dementia (not age-standardised) is significantly lower in all communities of practice except Uckfield. Emergency admissions for persons with dementia are significantly lower in most communities of practice but significantly higher in Havens. Rates of working age people claiming ESA due to mental health problems are significantly lower than for East Sussex in Crowborough, Lewes and Uckfield. The CAMHS caseload rate is significantly higher in Havens than in East Sussex.

Circulatory

Generally the prevalence of circulatory conditions (not age-standardised) is significantly lower in this CCG than in East Sussex. For high blood pressure and atrial fibrillation this is the case in all communities of practice in the CCG. Havens is the only community of practice in the CCG with significantly higher emergency admissions due to CHD than East Sussex. Premature mortality from circulatory diseases is significantly lower than for East Sussex in all communities of practice except Havens.

Cancer

Compared to East Sussex, premature mortality due to cancer is significantly worse in Havens and significantly better in Crowborough and Lewes. The CCG has similar incidence and mortality to East Sussex for lung, colorectal, breast and prostate cancers.

Respiratory

This CCG has the lowest prevalences (not age-standardised) and emergency admissions for asthma and COPD and significantly lower than for East Sussex. But although these are all significantly lower in Crowborough, Uckfield and Lewes, they are higher (in most cases significantly higher) in Havens. This CCG has the lowest mortality from COPD and premature mortality from respiratory diseases of the three CCGs. But mortality from COPD is significantly higher in Havens than in East Sussex. Uckfield has significantly lower emergency admissions for asthma per 1,000 asthmatics on GP registers and significantly lower premature mortality from respiratory diseases and in both cases the lowest rates of all East Sussex localities.

Diabetes

Compared to East Sussex, the prevalence of diabetes (not age-standardised) is significantly lower across all communities of practice in the CCG except Havens where it is significantly higher.

Other chronic conditions

This CCG has significantly lower prevalences of other chronic conditions (not age-standardised) than East Sussex. But within the CCG Havens has the highest prevalences of epilepsy and CKD (not age-standardised). Uckfield has a significantly lower prevalence of CKD and higher prevalence of learning disabilities. This CCG has similar premature mortality from liver disease to East Sussex but Havens has the highest rate within the CCG.

Avoidable admissions

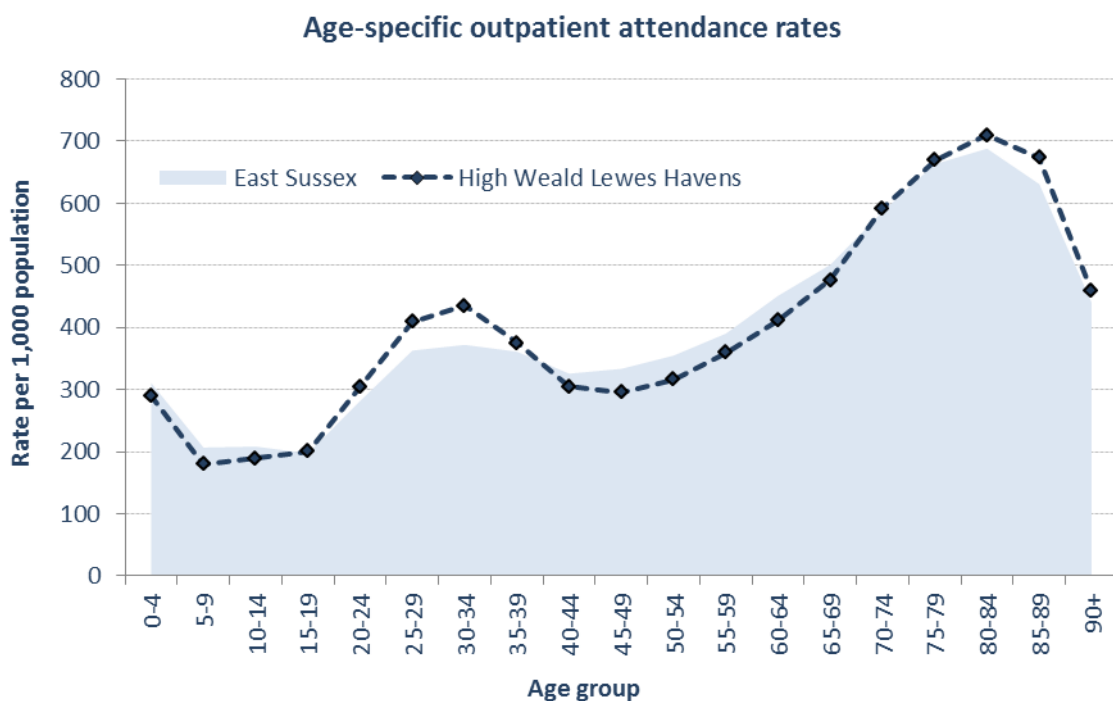

The CCG has significantly lower emergency admissions for diabetes/epilepsy/asthma in under 20s, and chronic and acute ACS conditions. Havens is the only community of practice in the CCG where emergency admissions for chronic and acute ACS conditions are not significantly lower than for East Sussex, and the only one with significantly higher

emergency admissions for LRTIs in under 20s and emergency admissions for other/vaccine preventable ACS conditions.

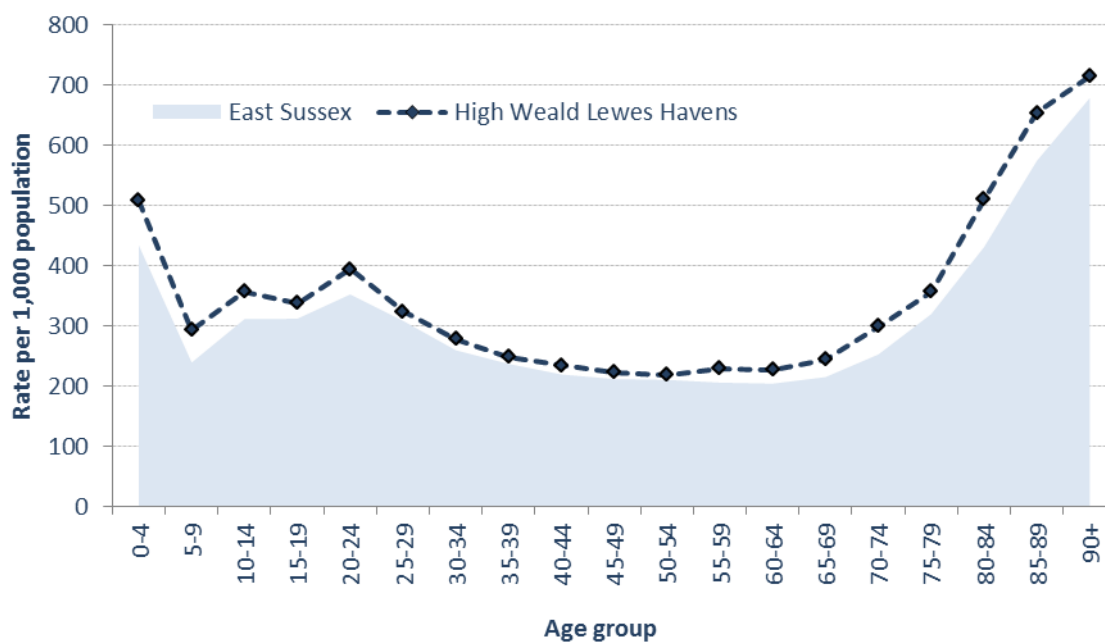

Hospital admissions and attendances

Overall the CCG has lower outpatient attendances, higher MIU/A&E attendances and lower elective and emergency admissions. All its communities of practice have significantly higher MIU/A&E attendances than East Sussex. Havens has significantly higher outpatient attendances, elective admissions and emergency admissions.

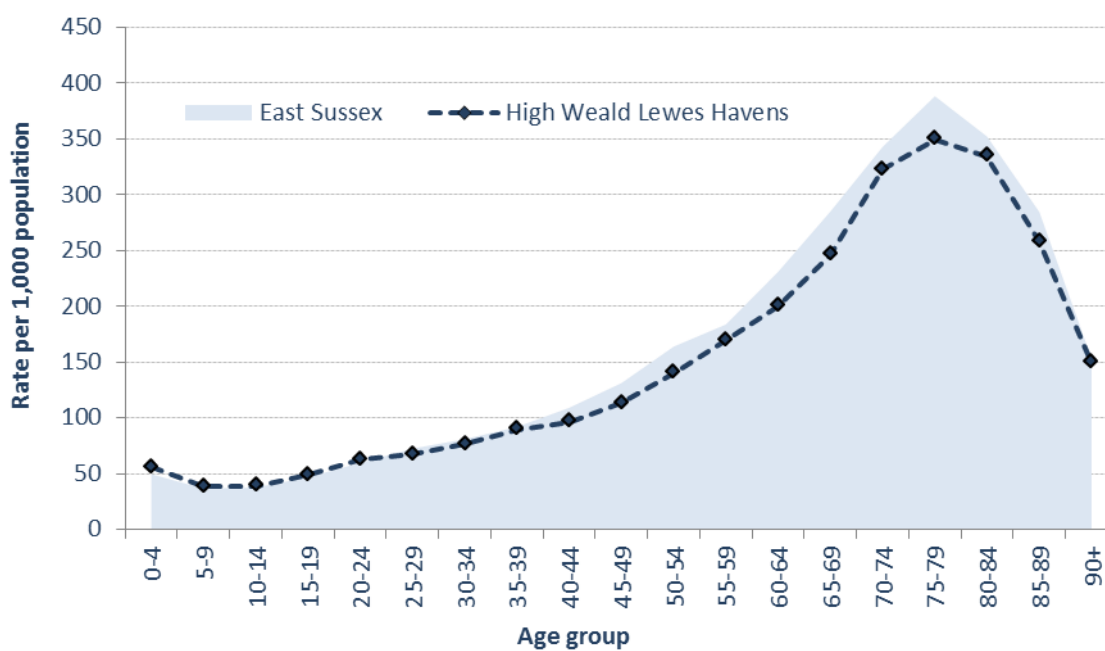

The following graphs present the age-specific overall attendance and admission rates for the CCG compared to East Sussex.

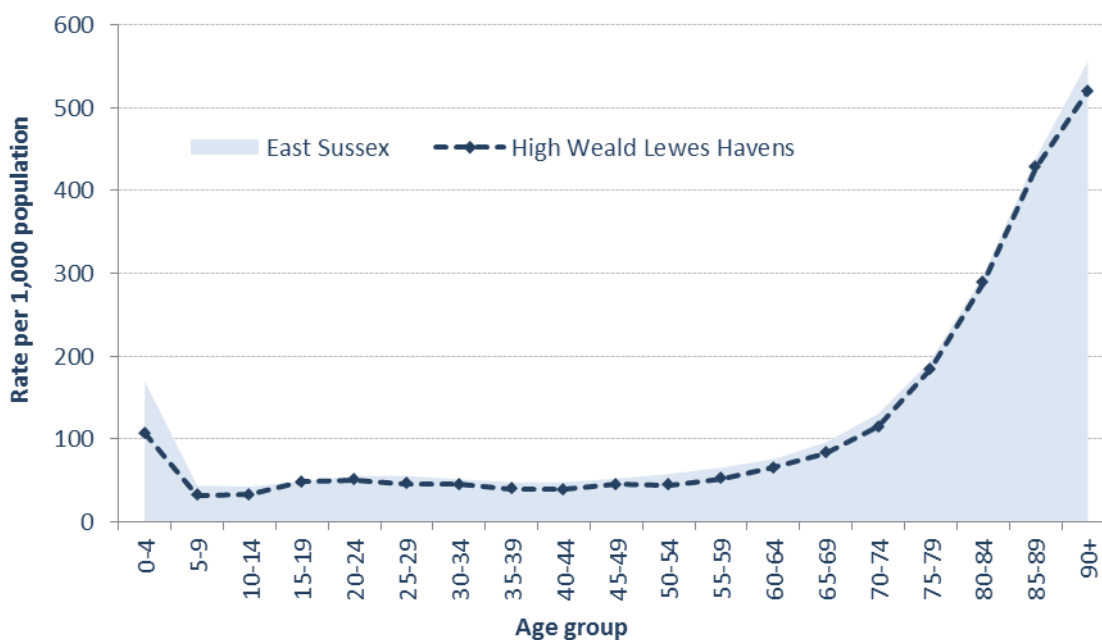

Age-specific A&E/MIU attendance rates

Age-specific elective admission rates

Age-specific emergency admission rates

Social care

Children's services

The CCG is significantly lower than East Sussex for referrals to children's social care, children on child protection plans and looked after children. This is the case for all communities of practice except Havens, which is significantly higher and the highest of all East Sussex localities for referrals to children's social care, but is similar to East Sussex for children on child protection plans and looked after children.

Carers

Compared to East Sussex Lewes is slightly higher for people providing one hour or more of unpaid care per week and Crowborough and Uckfield slightly lower. Crowborough, Lewes and Uckfield are significantly lower for unpaid carers providing 20 hours or more care per week, working age people claiming Carers Allowance, carers known to adult social care and those receiving self-direct support. Compared to East Sussex Havens has significantly higher unpaid carers providing 20 hours or more care per week and working age people claiming carers allowance.

Adult social care

Compared to East Sussex Crowborough, Lewes and Uckfield are significantly lower for requests for ASC support, adults receiving self-directed payments, working age people receiving long term support, and adults receiving community equipment and ASC funded lifeline or telecare. Crowborough and Uckfield are significantly lower for adults receiving direct payments. Havens is significantly higher for adults receiving community equipment and older people discharged from hospital to intermediate care. All communities of practice in the CCG except Crowborough are significantly lower than East Sussex for adults in council supported residential or nursing care.

NHS dental services

Compared to East Sussex, significantly lower percentages of working-age and older adults access East Sussex NHS general dental services. However within the CCG Crowborough has the lowest percentage of adults and children, whereas Uckfield and Lewes have the highest percentages of children and working age adults, accessing these services.

GP patient survey

The percentage of patients responding to the GP Patient Survey is similar to East Sussex in Havens but significantly higher elsewhere in the CCG. Compared to East Sussex the percentage of patients with a good experience of their surgery is significantly higher in Crowborough, but significantly lower in Uckfield. Percentages of patients reporting a good experience of making appointments and satisfaction with opening hours are significantly higher in Crowborough but significantly lower in Lewes and Uckfield. Lewes also has significantly fewer patients reporting nurses are good at involving them in decisions on care.
